School Statement:
Weeroona College Bendigo will comply with the Ministerial Order 706: Anaphylaxis Management in Victorian Schools and guidelines on anaphylaxis management as published by the Department of Education and Early Childhood Development. (Guidelines kept in the General Office and Wellbeing Department).

Background:
Anaphylaxis is a severe, rapidly progressive allergic reaction that is potentially life threatening. The most common allergens in school aged children are peanuts, eggs, tree nuts (e.g. cashews), cow's milk, fish and shellfish, wheat, soy, sesame, latex, certain insect stings and medication. The key to prevention of anaphylaxis in schools is knowledge of those students who have been diagnosed at risk, awareness of triggers (allergens), and prevention of exposure to these triggers. Partnerships between schools and parents are important in ensuring that certain foods or items are kept away from the student while at the school. Adrenaline given through an EpiPen auto-injector to the muscle of the outer mid thigh is the most effective first aid treatment for anaphylaxis.

Purpose:
- To provide, as far as practicable, a safe and supportive environment in which students at risk of anaphylaxis can participate equally in all aspects of the student's schooling.
- To raise awareness about anaphylaxis and the school's anaphylaxis management policy in the school community.
- To engage with parents/carers of students at risk of anaphylaxis in assessing risks, developing risk minimisation strategies and management strategies for the student.
- To ensure that each staff member has adequate knowledge about allergies, anaphylaxis and the school's policy and procedures in responding to an anaphylactic reaction.

Individual Anaphylaxis Management Plans:
The principal will ensure that an individual anaphylaxis management plan is developed, in consultation with the student's parents, for any student who has been diagnosed by a medical practitioner as being at risk of anaphylaxis. The individual anaphylaxis management plan will be in place as soon as practicable after the student enrols and where possible before their first day at the school. All student ASCIA Action Plans & Individual Anaphylaxis Management Plans are kept in the General Office as well as in each Learning Community (Learning Community Leaders office).
The individual anaphylaxis management plan will set out the following:
- Information about the diagnosis, including the type of allergy or allergies the student has (based on the diagnosis from a medical practitioner).
- Strategies to minimise the risk of exposure to allergens while the student is under the care of supervision of school staff, for in-school and out of school settings including camps and excursions.
- The name of the person/s responsible for implementing the strategies.
- Information on where the student's medication will be stored.
- The student's emergency contact details.
- An emergency procedures plan (ASCIA Action Plan), provided by the parent, that:
  o Sets out the emergency procedures to be taken in the event of an allergic reaction:
  o Is signed by a medical practitioner who was treating the child on the date the practitioner signs the emergency procedures plan; and
  o Includes an up to date photograph of the student.

Note: The red and blue “ASCIA Action Plan” is the most common form of emergency procedures plan that is provided by medical practitioners to parents when a child is diagnosed as being at risk of anaphylaxis. This form is available from the following sources:
The student’s individual management plan will be reviewed, in consultation with the student’s parents/carers:
   • Annually, and as applicable,
   • If the student’s conditions changes, or
   • Immediately after a student has an anaphylactic reaction at school.
It is the responsibility of the parent to:
   • Provide the emergency procedures plan (ASCIA Action Plan).
   • Inform the school if their child’s medical condition changes, and if relevant provide an updated emergency procedures plan (ASCIA Action Plan).
   • Provide an up to date photo for the emergency protocols plan (ASCIA Action Plan) when the plan is provided to the school and when it is reviewed.

Prevention Strategies:
Risk minimisation and prevention strategies should be considered for all relevant in-school and out-of-school settings (but are not limited to) the following:
   • During classroom activities (including class rotations, specialists and elective classes);
   • Between classes and other breaks;
   • In canteens;
   • During recess and lunchtimes;
   • Before and after school; and
   • Special events including incursions, sports, cultural days, fetes or class parties, excursions and camps

1. In School Settings:

<table>
<thead>
<tr>
<th>Liaise with Parents about food-related activities ahead of time.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use non-food treats where possible, but if food treats are used in class it is recommended that Parents of students with food allergy provide a treat box with alternative treats. Treat boxes should be clearly labelled and only handled by the student.</td>
</tr>
<tr>
<td>Never give food from outside sources to a student who is at risk of anaphylaxis.</td>
</tr>
<tr>
<td>Treats for the other students in the class should not contain the substance to which the student is allergic. It is recommended to use non-food treats where possible.</td>
</tr>
<tr>
<td>Products labelled ‘may contain traces of nuts’ should not be served to students allergic to nuts. Products labelled ‘may contain milk or egg’ should not be served to students with milk or egg allergy and so forth.</td>
</tr>
<tr>
<td>Be aware of the possibility of hidden allergens in food and other substances used in cooking, food technology, science and art classes (e.g. egg or milk cartons, empty peanut butter jars).</td>
</tr>
<tr>
<td>Ensure all cooking utensils, preparation dishes, plates, and knives and forks etc are washed and cleaned thoroughly after preparation of food and cooking.</td>
</tr>
<tr>
<td>Have regular discussions with students about the importance of washing hands, eating their own food and not sharing food.</td>
</tr>
<tr>
<td>A designated staff member should inform casual relief teachers, specialist teachers and volunteers of the names of any students at risk of anaphylaxis, the location of each student’s Individual Anaphylaxis Management Plan and Adrenaline Auto-injector, the School’s Anaphylaxis Management Policy, and each individual person’s responsibility in managing an incident i.e. seeking a trained staff member.</td>
</tr>
</tbody>
</table>
Weeroona College Bendigo  
Anaphylaxis Management Policy  
May 2014

2. Canteens:

| Canteen staff (whether internal or external) should be able to demonstrate satisfactory training in food allergen management and its implications on food-handling practices, including knowledge of the major food allergens triggering anaphylaxis, cross-contamination issues specific to food allergy, label reading, etc. Refer to:  
| Helpful resources for food services: http://www.allergyfacts.org.au/component/virtuemart/  
| Canteen staff, including volunteers, should be briefed about students at risk of anaphylaxis and, where the Principal determines in accordance with clause 12.1.2 of the Order, have up to date training in an Anaphylaxis Management Training Course as soon as practical after a student enrolls.  
| Display the student’s name and photo in the canteen as a reminder to School Staff.  
| Products labelled ‘may contain traces of nuts’ should not be served to students allergic to nuts.  
| Canteens should provide a range of healthy meals/products that exclude peanut or other nut products in the ingredient list or a ‘may contain...’ statement.  
| Make sure that tables and surfaces are wiped down with warm soapy water regularly.  
| Food banning is not generally recommended. Instead, a ‘no-sharing’ with the students with food allergy approach is recommended for food, utensils and food containers. However, school communities can agree to not stock peanut and tree nut products (e.g. hazelnuts, cashews, almonds, etc.), including chocolate/hazelnut spreads.  
| Be wary of contamination of other foods when preparing, handling or displaying food. For example, a tiny amount of butter or peanut butter left on a knife and used elsewhere may be enough to cause a severe reaction in someone who is at risk of anaphylaxis from cow’s milk products or peanuts. |

3. Yard:

| If WCB has a student who is at risk of anaphylaxis, sufficient School Staff on yard duty must be trained in the administration of the Adrenaline Auto-Injector (i.e. EpiPen®/ Anapen®) to be able to respond quickly to an anaphylactic reaction if needed.  
| The Adrenaline Auto-Injector and each student’s Individual Anaphylaxis Management Plan are easily accessible and staff should be aware of their exact location. (Remember that an anaphylactic reaction can occur in as little as a few minutes).  
| WCB must have a Communication Plan in place so the student’s medical information and medication can be retrieved quickly if a reaction occurs in the yard. All staff on yard duty must be aware of the School’s Emergency Response Procedures and how to notify the general office/first aid team of an anaphylactic reaction in the yard.  
| Yard duty staff must also be able to identify, by face, those students at risk of anaphylaxis.  
| Students with anaphylactic responses to insects should be encouraged to stay away from water or flowering plants. School Staff should liaise with Parents to encourage students to wear light or dark rather than bright colours, as well as closed shoes and long-sleeved garments when outdoors.  
| Keep lawns and clover mowed and outdoor bins covered.  
| Students should keep drinks and food covered while outdoors.  

This policy was reviewed by school council in May 2014
4. Special Events (sporting events, incursion, class parties etc.):

If WCB has a student at risk of anaphylaxis, sufficient School Staff supervising the special event must be trained in the administration of an Adrenaline Auto-injector to be able to respond quickly to an anaphylactic reaction if required.

School Staff should avoid using food in activities or games, including as rewards.

For special occasions, School Staff should consult Parents in advance to either develop an alternative food menu or request the Parents to send a meal for the student.

Parents of other students should be informed in advance about foods that may cause allergic reactions in students at risk of anaphylaxis and request that they avoid providing students with treats whilst they are at School or at a special School event.

Party balloons should not be used if any student is allergic to latex.

5. Camps & Remote Settings:

Prior to engaging a camp owner/operator’s services WCB will make enquiries as to whether it can provide food that is safe for anaphylactic students. If a camp owner/operator cannot provide this confirmation to the School, then the School should consider using an alternative service provider.

The camp cook should be able to demonstrate satisfactory training in food allergen management and its implications on food-handling practices, including knowledge of the major food allergens triggering anaphylaxis, cross-contamination issues specific to food allergy, label reading, etc.

WCB will not sign any written disclaimer or statement from a camp owner/operator that indicates that the owner/operator is unable to provide food which is safe for students at risk of anaphylaxis. WCB has a duty of care to protect students in their care from reasonably foreseeable injury and this duty cannot be delegated to any third party.

WCB will conduct a risk assessment and develop a risk management strategy for students at risk of anaphylaxis. This should be developed in consultation with Parents of students at risk of anaphylaxis and camp owners/operators prior to the camp dates.

WCB Staff should consult with Parents of students at risk of anaphylaxis and the camp owner/operator to ensure that appropriate risk minimisation and prevention strategies and processes are in place to address an anaphylactic reaction should it occur. If these procedures are deemed to be inadequate, further discussions, planning and implementation will need to be undertaken.

If the School has concerns about whether the food provided on a camp will be safe for students at risk of anaphylaxis, it should also consider alternative means for providing food for those students.

Use of substances containing allergens should be avoided where possible.

Camps should avoid stocking peanut or tree nut products, including nut spreads. Products that ‘may contain’ traces of nuts may be served, but not to students who are known to be allergic to nuts.

The student’s Adrenaline Auto-injector, Individual Anaphylaxis Management Plan, including the ASCIA Action Plan for Anaphylaxis and a mobile phone must be taken on camp. If mobile phone access is not available, an alternative method of communication in an emergency must be considered, e.g. a satellite phone.

Prior to the camp taking place WCB School Staff should consult with the student’s Parents to review the students Individual Anaphylaxis Management Plan to ensure that it is up to date and relevant to the circumstances of the particular camp.

WCB School Staff participating in the camp should be clear about their roles and responsibilities in the event of an anaphylactic reaction. Check the emergency response procedures that the camp provider has in place. Ensure that these are sufficient in the event of an anaphylactic reaction and ensure all School Staff participating in the camp are clear about their roles and responsibilities.

Contact local emergency services and hospitals well prior to the camp. Advise full medical conditions of students at risk, location of camp and location of any off camp activities. Ensure contact details of emergency services are distributed to all School Staff as part of the emergency response procedures developed for the camp.

Schools should consider taking an Adrenaline Auto-injector for General Use on a school camp, even if there is no student at risk of anaphylaxis, as a back up device in the event of an emergency.

WCB should consider purchasing an Adrenaline Auto-injector for General Use to be kept in the first aid kit and including this as part of the Emergency Response Procedures.

The Adrenaline Auto-injector should remain close to the student and School Staff must be aware of its location at all times.

The Adrenaline Auto-injector should be carried in the school first aid kit; however, Schools can consider allowing students, particularly adolescents, to carry their Adrenaline Auto-injector on camp. Remember that all School Staff members still have a duty of care towards the student even if they do carry their own Adrenaline Auto-injector.

Students with anaphylactic responses to insects should always wear closed shoes and long-sleeved garments when outdoors and should be encouraged to stay away from water or flowering plants.
Consider the potential exposure to allergens when consuming food on buses and in cabins.

6. Overseas Travel:

Review and consider the strategies listed under “Field Trips/Excursions/Sporting Events” and “Camps and Remote Settings”. Where an excursion or camp is occurring overseas, Schools should involve Parents in discussions regarding risk management well in advance.

Investigate the potential risks at all stages of the overseas travel such as:

- travel to and from the airport/port;
- travel to and from Australia (via aeroplane, ship etc);
- various accommodation venues;
- all towns and other locations to be visited;
- sourcing safe foods at all of these locations; and
- risks of cross contamination, including:
  - exposure to the foods of the other students;
  - hidden allergens in foods;
  - whether the table and surfaces that the student may use will be adequate cleaned to prevent a reaction; and
  - whether the other students will wash their hands when handling food.

Assess where each of these risks can be managed using minimisation strategies such as the following:

- translation of the student’s Individual Anaphylaxis Management Plan and ASCIA Action Plan;
- sourcing of safe foods at all stages;
- obtaining the names, address and contact details of the nearest hospital and Medical Practitioners at each location that may be visited;
- obtaining emergency contact details; and
- sourcing the ability to purchase additional auto-injectors.

Record details of travel insurance, including contact details for the insurer. Determine how any costs associated with medication, treatment and/or alteration to the travel plans as a result of an anaphylactic reaction can be paid.

Plan for appropriate supervision of students at risk of anaphylaxis at all times, including that:

- there are sufficient School Staff attending the excursion who have been trained in accordance with Chapter 12;
- there is an appropriate level of supervision of anaphylactic students throughout the trip, particularly at times when they are taking medication and eating food;
- there will be capacity for adequate supervision of any affected student(s) requiring medical treatment, and that adequate supervision of other students will be available; and
- staff/student ratios should be maintained during the trip, including in the event of an emergency where the students may need to be separated.

The School should re-assess its Emergency Response Procedures, and if necessary adapt it to the particular circumstances of the overseas trip. Keep a record of relevant information such as the following:

- dates of travel;
- name of airline, and relevant contact details;
- itinerary detailing the proposed destinations, flight information and the duration of the stay in each location;
- hotel addresses and telephone numbers;
- proposed means of travel within the overseas country;
- list of students and each of their medical conditions, medication and other treatment (if any);
- emergency contact details of hospitals, ambulances, and Medical Practitioners in each location;
Anaphylaxis Management Policy

Weeroona College Bendigo

May 2014

- details of travel insurance
- plans to respond to any foreseeable emergency including who will be responsible for the implementation of each part of the plans;
- possession of a mobile phone or other communication device that would enable the School Staff to contact emergency services in the overseas country if assistance is required.

7. **Work Experience:**

Schools should involve Parents, the student and the employer in discussions regarding risk management prior to a student at risk of anaphylaxis attending work experience. Staff must be shown the ASCIA Action Plan for Anaphylaxis and how to use the Adrenaline Autoinjector in case the work experience student shows signs of an allergic reaction whilst at work experience.

It is important to note that it is not recommended that banning of food or other products is used as a risk minimisation and prevention strategy. The reasons for this are as follows:

- it can create complacency among staff and students;
- it does not eliminate the presence of hidden allergens; and
- it is difficult to "ban" all triggers (allergens) because these are not necessarily limited to peanuts and nuts. Triggers and common allergens can also include eggs, dairy, soy, wheat, sesame, seeds, fish and shellfish.

**Communication Plan:**

The principal will be responsible for ensuring that a communication plan is developed to provide awareness, working with parents/carers and engaging the broader school community.

The communication plan will include information about what steps will be taken to respond to an anaphylactic reaction by a student in a classroom, in the school yard, on school excursions, on school camps and special events days.

Volunteers and casual relief staff of students at risk of anaphylaxis will be informed of students at risk of anaphylaxis and their role in responding to an anaphylactic reaction by a student.

Please refer to attachment: **Communication Plan – Appendix 1.**

**Appendices:**

- Communication Plan – Appendix 1.
- Risk Management Checklist – Appendix 2.
- Individual Anaphylaxis Management Plan – Appendix 3.

**References:**

- DEECD Anaphylaxis Policy.
Appendix A COMMUNICATION PLAN

The principal has an overall responsibility for implementing strategies and processes for ensuring a safe and supportive environment for students at risk of anaphylaxis.

The communication plan includes procedures to inform volunteers and casual relief staff of students with a medical condition that relate to allergy and potential for anaphylactic reaction and their role in responding to an anaphylactic reaction by a student in their care.

It must also include strategies for advising School Staff, students and parents about how to respond to an anaphylactic reaction of a student in various environments including:

- During normal school activities including in the classroom, in the school yard, in all school buildings and sites including gymnasiums and halls; and
- During off-site or out of school activities, including on excursions, school camps and at special events conducted, organised or attended by the School.

It is the responsibility of the Principal of Weeroona College Bendigo to ensure that the School Staff are:

- Trained; and
- Briefed at least twice per calendar year.

(Refer to Chapter 12 as per the DEECD Anaphylaxis Guidelines – A resource for managing severe allergies in Victorian schools).

Raising Staff Awareness:

Relevant school staff must be briefed at least twice per year by a staff member who has current anaphylaxis management training.

The principal is responsible for ensuring that all volunteers and casual relief staff, and new school staff (including administration and office staff, canteen staff, sessional teachers, specialist teachers) receive briefing of the above information and their role in responding to an anaphylactic reaction by a student in their care. This must be provided by a staff member who has up to date anaphylaxis management training on:

- The school’s anaphylaxis management policy.
- The causes, symptoms and treatment of anaphylaxis.
- The identities of students diagnosed at risk of anaphylaxis and where their medication is located.
- How to use an Auto-injecting Adrenaline device.
- The school’s first aid and emergency response procedures.

Raising student awareness:

School staff can raise awareness in school through fact sheets or posters displayed in Learning Communities, the canteen and classrooms. Class teachers are strongly encouraged to discuss the topic with students in their class, with a few simple key messages, e.g. wash your hands after eating.

It is important to:

- Do not single out a student that is at risk of anaphylaxis.
- Be aware that bullying of a student at risk of anaphylaxis can occur.
- Talk to students involved in bullying so they are aware of the seriousness of an anaphylactic reaction.

Work with parents:

Parents of a student who is at risk of anaphylaxis may experience considerable anxiety about sending their child to school. It is important to:

- Develop an open and cooperative relationship with them.
- Discuss the appropriate management strategies that have been put in place.
- Discuss the practical prevention strategies in place at Weeroona College Bendigo.
- Provide regular communication and increase education, awareness and support from the school community.

Raising School Awareness:

Weeroona College Bendigo will actively raise awareness about anaphylaxis in the school community so that there is an increased understanding of the condition. This will be done by:

- Information about Anaphylaxis on the school website.
Weeroona College Bendigo | Anaphylaxis Management Policy | May 2014

- Regular information in the school newsletter.
- Education provided to students at Weeroona College Bendigo.
- Provide links to relevant resources:
  - [www.rch.org.au/allergy/parent_information_sheets/Parent_Information_Sheets/](http://www.rch.org.au/allergy/parent_information_sheets/Parent_Information_Sheets/)
  - [www.allergy.org.au](http://www.allergy.org.au)

**Storage of Adrenaline Autoinjectors:**
At WCB, Adrenaline Auto-injectors:
- For individual students or for general use, will be stored correctly and be able to be accessed quickly.
- Will be stored in an unlocked, easily accessible place away from direct light and heat but not in a refrigerator or freezer.
- Will be clearly labelled with the student’s name and be stored with a copy of the student’s ASCIA Action Plan.
- The General Use (Adrenaline Auto-Injector) will be clearly labelled and distinguishable from those for students at risk of anaphylaxis.
- Trainer Adrenaline Autoinjectors (which do not contain adrenaline or a needle are not stored in the same location due to the risk of confusion.

**Staff Training:**
Teachers and other school staff who conduct classes which students at risk of anaphylaxis attend, or give instruction to students at risk of anaphylaxis, must have up to date training in an anaphylaxis management training course (as per DEECD - St John Ambulance Victoria).
At other times while the student is under the care of supervision of the school, including excursions, yard duty, camps and special event days, the principal must ensure that there is a sufficient number of staff present who has up to date training in an anaphylaxis management training course (as per DEECD - Course in First Aid Management of Anaphylaxis 22099VIC).

Please refer to attachment: *Risk Assessment Checklist – Appendix 2.*

Training will be provided to these staff as soon as practicable after the student enrolls. Wherever possible, training will take place before the students first day at school. Where this is not possible, an interim plan will be developed in consultation with the parents. The school’s first aid procedures and students emergency procedure plan (ASCIA Action Plan & Individual Anaphylaxis Management Plan) will be followed when responding to an anaphylactic reaction.

**Emergency Response:**

1. **Self-administration of the Adrenaline Autoinjector:**
   The decision whether a student can carry their own Adrenaline Auto-injector should be made when developing the student’s Individual Anaphylaxis Management Plan, in consultation with the student, the student’s parents and the student’s Medical Practitioner.

   If a student self-administers an Adrenaline Auto-injector, one member of the School Staff should supervise and monitor the student, and another member of the School Staff should contact an ambulance (000).

   If a student carries their own Adrenaline Auto-injector, it may be prudent to keep a second Adrenaline Auto-injector (provided by the parent) on-site in the sick bay, easily accessible & in an unlocked location that is known to all School Staff.

2. **Responding to an incident:**
   Where possible, only School Staff with training in the administration of the Adrenaline Auto-injector should administer the student’s Adrenaline Auto-injector. It is imperative that the Adrenaline Auto-injector be administered as soon as possible after an anaphylactic reaction. The Adrenaline Auto-injector can also be administered by any person following the instructions in the students’ ASCIA Action Plan & Individual Anaphylaxis Management Plan.
a. **In-school Environment:**

### Emergency Response

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Teacher must remain with the student whilst another School Staff member contacts the General Office and retrieves the student’s Adrenaline Auto-injector &amp; the student’s Individual Anaphylaxis Management Plan (includes the ASCIA Action Plan).</td>
</tr>
<tr>
<td>2.</td>
<td>General Office will <strong>immediately</strong> call an ambulance (000). They must remain on line in case of further instructions.</td>
</tr>
<tr>
<td>3.</td>
<td>Nominate a staff member to wait for an ambulance at a designated school entrance.</td>
</tr>
<tr>
<td>4.</td>
<td>If a First-time reaction occurs please follow instructions as below in “First-time Reactions”.</td>
</tr>
<tr>
<td>5.</td>
<td>Once the Adrenaline Auto-injector is retrieved, administer the EpiPen®.</td>
</tr>
<tr>
<td>6.</td>
<td>Remove the plastic container.</td>
</tr>
<tr>
<td>7.</td>
<td>Form a fist around the EpiPen® and pull off the blue safety cap.</td>
</tr>
<tr>
<td>8.</td>
<td>Place orange end against the student’s outer mid-thigh (with or without clothing).</td>
</tr>
<tr>
<td>9.</td>
<td>Push down hard until a click is heard or felt and hold in place for 10 seconds.</td>
</tr>
<tr>
<td>10.</td>
<td>Remove the EpiPen®.</td>
</tr>
<tr>
<td>11.</td>
<td>Massage injection site for 10 seconds.</td>
</tr>
<tr>
<td>12.</td>
<td>Note the time you administered the EpiPen®.</td>
</tr>
<tr>
<td>13.</td>
<td>The used auto-injector must be handed to the ambulance paramedics along with the time of administration.</td>
</tr>
<tr>
<td>14.</td>
<td>If parent is unable to meet the student at the hospital, the staff member involved must attend the hospital with the student.</td>
</tr>
</tbody>
</table>

### If an Adrenaline Autoinjector is administered, the School must:

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Immediately call an ambulance (000) if it has not been done already.</td>
</tr>
<tr>
<td>2.</td>
<td>Lay the student flat and elevate the legs. Do not allow the student to stand or walk. If breathing is difficult for them, allow them to sit but not to stand.</td>
</tr>
<tr>
<td>3.</td>
<td>Reassure the student experiencing the reaction as they are likely to be feeling anxious and frightened as a result of the reaction and the side-effects of the adrenaline. Watch the student closely in case of a worsening condition. Ask another staff member of the School Staff to move other students away and reassure them elsewhere.</td>
</tr>
</tbody>
</table>

b. **Out-of-school Environments:**

### Emergency Response:

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Excursions and Camps – Each individual camp and excursion requires risk assessment for each individual student attending who is at risk of anaphylaxis.</td>
</tr>
<tr>
<td>2.</td>
<td>A team of School Staff trained in anaphylaxis need to attend each event (minimum of one).</td>
</tr>
<tr>
<td>3.</td>
<td>The student’s EpiPen® should be taken personally by the classroom teacher to the activity or excursion, along with a Generic EpiPen®, from sick bay. They will ensure the EpiPen®’s are stored correctly (at room temperature and away from light) in an unlocked, easily accessible place.</td>
</tr>
<tr>
<td>4.</td>
<td>A mobile telephone must be taken to any off school campus activity attended by an anaphylactic student.</td>
</tr>
<tr>
<td>5.</td>
<td>In the event of an anaphylactic episode staff attending with the student will follow the student’s ASCIA action plan &amp; administer the Adrenaline Auto-injector, noting the time given, and then rings 000 for an ambulance.</td>
</tr>
<tr>
<td>6.</td>
<td>If it is a student who does <strong>not</strong> have a known anaphylaxis see instructions below for first time reactions.</td>
</tr>
<tr>
<td>7.</td>
<td>The staff member will be required to contact the General Office to inform the Principal of the incident.</td>
</tr>
<tr>
<td>8.</td>
<td>The staff member will be required to contact parents/guardian or nominate a person to. If the staff member finds that the parents are unable to meet the child at hospital, the staff member will travel with the student to hospital.</td>
</tr>
</tbody>
</table>

---

*Post incident support:*

In the event of an anaphylactic reaction, students and School Staff may benefit from post-incident counselling, provided by School Wellbeing Team, or School Psychologist.*
Review Process:

1. The Adrenaline Auto-injector must be replaced by the Parent as soon as possible.

2. The Principal must ensure that there is an interim Individual Anaphylaxis Management Plan should another anaphylactic reaction occur prior to the replacement Adrenaline Auto-injector being provided.

3. If the Adrenaline Auto-injector for General Use has been used this should be replaced as soon as possible.

4. The Principal should ensure that there is an interim plan in place should another anaphylactic reaction occur prior to the replacement Adrenaline Auto-injector for General Use being provided.

5. The student’s Individual Management Plan should be reviewed in consultation with the student’s parents.

6. The School’s Anaphylaxis Management Policy should be reviewed to ensure it adequately responds to anaphylactic reactions by students who are in the care of School Staff.

First-time reactions:

If a student has a severe allergic reaction, but has not been previously diagnosed with an allergy or being at risk of anaphylaxis, the School Staff should follow the School’s First Aid Procedures.

This should include immediately contacting an Ambulance using 000. Follow any instructions given by emergency services.

#### General Information

1. How many current students have been diagnosed as being at risk of anaphylaxis, and have been prescribed an Adrenaline Autoinjector? 7
2. How many of these students carry their Adrenaline Autoinjector on their person? 2
3. Have any students ever had an allergic reaction requiring medical intervention at school? ☐ Yes ☒ No
   - If Yes, how many times?
4. Have any students ever had an Anaphylactic Reaction at school? ☐ Yes ☒ No
   - If Yes, how many students?
   - If Yes, how many times
5. Has a staff member been required to administer an Adrenaline Autoinjector to a student? ☐ Yes ☒ No
   - If Yes, how many times?
6. Was every incident in which a student suffered an anaphylactic reaction reported via the Incident Reporting and Information System (IRIS)? ☐ Yes ☒ No
   - Not applicable.

#### SECTION 1: Individual Anaphylaxis Management Plans

7. Does every student who has been diagnosed as being at risk of anaphylaxis and prescribed an Adrenaline Autoinjector have an Individual Anaphylaxis Management Plan and ASCIA Action Plan completed and signed by a prescribed Medical Practitioner? ☐ Yes ☒ No
8. Are all Individual Anaphylaxis Management Plans reviewed regularly with Parents (at least annually)? ☒ Yes ☐ No
9. Do the Individual Anaphylaxis Management Plans set out strategies to minimise the risk of exposure to allergens for the following in-school and out of class settings?
   - During classroom activities, including elective classes ☒ Yes ☐ No
### Anaphylaxis Management Policy

This policy was reviewed by school council in May 2014.

</tr>
<tr>
<td>20. Has someone been designated to check the Adrenaline Autoinjector expiry dates on a regular basis?</td>
<td>☑</td>
<td>☐</td>
</tr>
</tbody>
</table>

Who? **Melinda Gilligan** (First Aid Officer).
21. Are there Adrenaline Autoinjectors which are currently in the possession of the School and which have expired?  
☐ Yes ☑ No

22. Has the School signed up to EpiClub or ANA-alert (optional free reminder services)?  
☑ Yes ☐ No

23. Do all School Staff know where the Adrenaline Autoinjectors and the Individual Anaphylaxis Management Plans are stored?  
☐ Yes ☐ No

24. Has the School purchased Adrenaline Autoinjector(s) for General Use, and have they been placed in the School’s first aid kit(s)?  
☐ Yes ☐ No

25. Where are these first aid kits located?  
- First Aid Office (General Office).  
- Each Learning Community Leaders Office (x 4).

26. Is the Adrenaline Autoinjector for General Use clearly labelled as the ‘General Use’ Adrenaline Autoinjector?  
☐ Yes ☐ No

27. Is there a register for signing Adrenaline Autoinjectors in and out when taken for excursions, camps etc?  
☐ Yes ☑ No

SECTION 3: Prevention Strategies

28. Have you done a risk assessment to identify potential accidental exposure to allergens for all students who have been diagnosed as being at risk of anaphylaxis?  
☑ Yes ☐ No

29. Have you implemented any of the prevention strategies in the Anaphylaxis Guidelines? If not record why?  
☑ Yes ☐ No

30. Have all School Staff who conduct classes with students with a medical condition that relates to allergy and the potential for anaphylactic reaction successfully completed an Anaphylaxis Management Training Course in the three years prior and participated in a twice yearly briefing?  
☐ Yes ☐ No

31. Are there always sufficient School Staff members on yard duty who have successfully completed an Anaphylaxis Management Training Course in the three years prior?  
☐ Yes ☐ No

SECTION 4: School Management and Emergency Response

32. Does the School have procedures for emergency responses to anaphylactic reactions? Are they clearly documented and communicated to all staff?  
☑ Yes ☐ No

33. Do School Staff know when their training needs to be renewed?  
☑ Yes ☐ No

34. Have you developed Emergency Response Procedures for when an allergic reaction occurs?  
☑ Yes ☐ No

a. In-School Environments?  
☑ Yes ☐ No

b. Out-of School Environments (at school camps and excursions)?  
☑ Yes ☐ No

35. Does your plan include who will call the Ambulance?  
☑ Yes ☐ No
36. Is there a designated person who will be sent to collect the student’s Adrenaline Autoinjector and Individual Anaphylaxis Management Plan (including the ASCIA Action Plan)?  
☐ Yes ☐ No

37. Have you checked how long it will take to get to the Adrenaline Autoinjector and Individual Anaphylaxis Management Plan (including the ASCIA Action Plan) to a student from various areas of the School including:

<table>
<thead>
<tr>
<th>Area</th>
<th>☐ Yes ☐ No</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. The classroom?</td>
<td></td>
</tr>
<tr>
<td>b. The school yard?</td>
<td></td>
</tr>
<tr>
<td>c. The sports field?</td>
<td></td>
</tr>
</tbody>
</table>

38. On excursions or other out of school events is there a plan for who is responsible for ensuring the Adrenaline Autoinjector(s) and Individual Anaphylaxis Management Plans (including the ASCIA Action Plan) and the Adrenaline Autoinjector for General Use are correctly stored and available for use?  
☐ Yes ☐ No

39. Who will make these arrangements during excursions?
- Teacher arranging the sporting activity.
- Advisor of the student as well as Learning Community Leader.
- First Aid Officer.

40. Who will make these arrangements during camps?
- Teacher arranging the sporting activity.
- Advisor of the student as well as Learning Community Leader.
- First Aid Officer.

41. Who will make these arrangements during sporting activities?
- Teacher arranging the sporting activity.
- Advisor of the student as well as Learning Community Leader.
- First Aid Officer.

42. Is there a process for post incident support in place?  
☐ Yes ☐ No

43. Have all School Staff who conduct classes that students with a medical condition that relates to allergy and the potential for an anaphylactic reaction and any other staff identified by the Principal, been briefed on:

<table>
<thead>
<tr>
<th>Topic</th>
<th>☐ Yes ☐ No</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. The School’s Anaphylaxis Management Policy?</td>
<td></td>
</tr>
<tr>
<td>b. The causes, symptoms and treatment of anaphylaxis?</td>
<td>☐ Yes ☐ No</td>
</tr>
<tr>
<td>c. The identities of students with a medical condition that relates to allergy and the potential for an anaphylactic reaction, and who are prescribed an Adrenaline Autoinjector, including where their medication is located?</td>
<td>☐ Yes ☐ No</td>
</tr>
<tr>
<td>d. How to use an Adrenaline Autoinjector, including hands on practice with a trainer Adrenaline Autoinjector?</td>
<td>☐ Yes ☐ No</td>
</tr>
<tr>
<td>e. The School’s general first aid and emergency response procedures for all in-school and out-of-school environments?</td>
<td>☐ Yes ☐ No</td>
</tr>
<tr>
<td>f. Where the Adrenaline Autoinjector(s) for General Use is kept?</td>
<td>☐ Yes ☐ No</td>
</tr>
<tr>
<td>g. Where the Adrenaline Autoinjectors for individual students are located including if they carry it on their person?</td>
<td>☐ Yes ☐ No</td>
</tr>
</tbody>
</table>
### SECTION 4: Communication Plan

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>44. Is there a Communication Plan in place to provide information about anaphylaxis and the School’s policies?</td>
<td><img src="%E2%98%91" alt="Yes" /> <img src="%E2%98%90" alt="No" /></td>
<td></td>
</tr>
<tr>
<td>a. To School Staff?</td>
<td><img src="%E2%98%91" alt="Yes" /> <img src="%E2%98%90" alt="No" /></td>
<td></td>
</tr>
<tr>
<td>b. To students?</td>
<td><img src="%E2%98%91" alt="Yes" /> <img src="%E2%98%90" alt="No" /></td>
<td></td>
</tr>
<tr>
<td>c. To Parents?</td>
<td><img src="%E2%98%91" alt="Yes" /> <img src="%E2%98%90" alt="No" /></td>

</tr>
<tr>
<td>e. To casual relief staff?</td>
<td><img src="%E2%98%91" alt="Yes" /> <img src="%E2%98%90" alt="No" /></td>
<td></td>
</tr>
</tbody>
</table>

**45. Is there a process for distributing this information to the relevant School Staff?**

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a. What is it?</td>
<td></td>
<td></td>
</tr>
<tr>
<td>- Folders available to all CRT and Volunteers with information regarding students at risk of anaphylaxis, ASCIA Action Plans and Individual Anaphylaxis Management Plans. This folder also contains the Communication Plan outlining the “Emergency Response” protocol.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

46. **How is this information kept up to date?**

- First Aid Office to regularly update folder with student anaphylaxis information and changes to ASCIA Action Plans and Individual Anaphylaxis Management Plans.

47. **Are there strategies in place to increase awareness about severe allergies among students for all in-school and out-of-school environments?**

<p>| | | |</p>
<table>
<thead>
<tr>

</tbody>
</table>

This policy was reviewed by school council in May 2014
### Part-time educators, casual relief teachers & welfare team and external group providers

- All educators at school will be informed of the identities of children at risk of anaphylaxis and will be made aware of the ASCIA Action Plans & Individual Anaphylaxis Management Plans.
- A designated staff member will inform casual relief teachers and specialist teachers of students at risk of anaphylaxis, the preventive strategies in place and the school’s emergency procedures.
- Provide casual relief teachers with a procedure sheet and a copy of the student’s ASCIA Action Plan for Anaphylaxis and a copy of the student’s Individual Management Plan.
- Casual staff who have not received training in anaphylaxis management and emergency treatment will need to be considered when allocated a class with a child at risk of anaphylaxis and if this teacher is on yard duty.
- Suggestions for CRT management in school:
  - Casual staff, who work at school will be invited to be included in anaphylaxis training sessions to increase the likelihood that they recognise an allergic reaction and know how to administer the adrenaline auto injector.
  - First Aid coordinator and Secondary School Nurse have interim educational tools such as auto injector training devices and DVDs available to all staff who wish to familiarise themselves further in between training.

### Yard Duty

- Students with Anaphylaxis will be excused from Yard duty and non-rubbish collecting duties allocated instead.
- The school will have sufficient staff on duty trained in the administration of a EpiPen®
  - Emergency procedures will be understood by all staff and ideally all staff will be Anaphylaxis trained.
  - Staff will follow the emergency procedures to be taken in the event of an allergic reaction.
  - Staff will stay with the student who is experiencing the reaction and direct another person to bring the students’ EpiPen® to them. Staff will not move the student experiencing the reaction or leave them unattended.
- Students with anaphylactic responses to insects will be encouraged to stay away from water and flowering plants. Staff may also liaise with parents/carers re wearing long sleeve garments when outdoors.

### Food brought to school for special event days etc.

- Engage parents in discussion prior to events and activities which will be using food

### School camps

- Parents are encouraged to organise a meeting with school staff/camp coordinator prior to camp to discuss safety including the following:
  - School’s emergency response procedures, roles and responsibilities of the teachers in policing prevention strategies and their roles and responsibilities in the event of an anaphylactic reaction

*This policy was reviewed by school council in May 2014*
- Advice prior to camp on what foods are not allowed or whether Parents preference is to provide all children’s food for the duration of the camp. If this is the case, storage and heating of food needs to be organised as well.

Parents are encouraged to provide two adrenaline auto injectors to be accompanied with the Action Plan for Anaphylaxis and any other required medications whilst the child is on the camp. An insulated bag with anaphylaxis and asthma medication will go with the student to the camp and is to accompany them everywhere, e.g. in backpack.

Teachers attending the camp will have current anaphylaxis training and at least one staff member will have current Level 2 First Aid and ensure they investigate the following:

- Contacting local emergency services and hospital prior to camp and advise that xx children in attendance at xx location on xx date including child/ren at risk of anaphylaxis.
- Ascertaining location of closest hospital, ability of ambulance to get to camp site area i.e. consider locked gates etc. in remote areas.
- Confirmation of mobile phone network coverage for standard mobile phones prior to camp. If no access to mobile phone network, alternative needs to be discussed and arranged.

Discussions by school staff and parents with the operators of the camp facility should be undertaken well in advance of camp.

Topics that need to be discussed would be:

- Possibility of removal of allergens from menu for the duration of the camp. If the camp operator cannot confirm with the school that it is able to provide food that is safe or that is can demonstrate sufficient awareness and satisfactory training in the management of food allergens, alternate camp providers will need to be considered.

- Creation of strategies to help reduce the risk of an allergic reaction where the allergen cannot be removed i.e. egg, milk, wheat.

- Awareness of cross contamination of allergens in general i.e. during storage preparation and serving of food.

- Games and activities should not involve the use of known allergens.

- Camp organisers need to consider domestic activities which they assign to children on camp.

(Further information is outlined in publication Preparing for Camps and Overnight School Trips with Food Allergies. Available from Anaphylaxis Australia.)

<table>
<thead>
<tr>
<th>Canteen</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parents are encouraged to visit the canteen kitchen to view products available and methods of preparation to discuss.</td>
</tr>
<tr>
<td>Canteen Manager to be fully aware of all foods that contain allergens and to have reviewed the ‘Safe food Handling’ in the school policy and advisory guide.</td>
</tr>
<tr>
<td>Review what strategies are taken to reduce risk such as:</td>
</tr>
</tbody>
</table>

Parents/first aid officer/canteen manager
• Measures to reduce risk of cross contamination of foods said to be ‘safe’ including awareness of canteen manager of cross contamination issue and ensuring all allergens removed prior to preparation of “safe” foods.

• Restrictions on who serves the child when they go to the canteen

• Anaphylaxis posters and student action plans with photo ID to be displayed in Canteen.

### Excursions, Sports and Swimming programs

Teachers organising/attending excursion or sporting event will plan an emergency response procedure prior to the event that outlines the roles and responsibilities of teachers attending, and their duties if an anaphylactic reaction occurs.

The students EpiPen® and ASCIA Action plan, as well as the generic use EpiPen® and a mobile phone will be taken by staff members on all school activities.

Party Balloons and swimming caps shall not be used for a student who is allergic to latex.

Students may need to bring their own sunscreen, to avoid any potential allergen.

**Staff will also endeavour to:**

• Check prior to the event, that mobile phone reception is available and if not, consider other form of emergency communication i.e. walkie talkie.

• Consider increased supervision depending on size of excursion/sporting event i.e. if students are split into groups at large venue e.g. zoo, or at large sports venue for sports carnival.

• Ensure the EpiPen®’s are signed in and out of the EpiPen® excursion log.

• Ensure the EpiPen®’s are stored correctly (at room temperature and away from light) in an unlocked, easily accessible place.

• Discourage eating on buses (which increases likelihood of exposure to allergen).

• Check if excursion includes a food related activity, if so discuss with parent.

• Ensure that all teachers are aware of the location of the emergency medical kit containing the EpiPen®.

• Have first aid stations at athletic days

### School Bus

Parent/carers will be involved in discussions with the school and encouraged to discuss safety strategies with the bus company, including the emergency medication and responses for anaphylaxis prior to the students travelling on the bus.

Assistant Principal and First aid coordinator.

### Medical Kit Management

Students own and school’s Eppen:

The medical kit will contain ASCIA Action Plan and is easily accessible in each student’s main learning area. The kit should be

First aid staff, staff accompanying.
This policy was reviewed by school council in May 2014

| taken with the student to all other campus and group excursions. | student on excursion, parents and student. |
| The Medical Kit will be kept with student or staff in easily accessible and appropriate place which avoids poor access or damage to the medicine i.e.: out of sun and not in warm or locked parked car or bus. |  |
| Student’s home kit can be kept in their locker (to be taken home every day by student for their safety in transit to and from school on transport). |  |
| In case of an anaphylaxis emergency Student Epipens and First Aid EpiPens should be accessed as quickly as possible and administered according to anaphylaxis action plan. |  |

### Overseas Travel

| Parent/carers will be involved in discussions well in advance of the excursion, with the school. They will discuss safety strategies with the staff member, including the emergency medication and responses for anaphylaxis. | Parents and staff organizing overseas trip. |
| It could require the lengthy process of translating names of allergens, emergency information and the students ASCIA Action plan. |  |
Appendix 4 ASCIA Action Plan
